Cosmic Space #2
80 x 200 cm (2 panel),
Acrylic on Canvas
2025

I Wayan Setem

Concept
Space is finite, and indeed, it does have boundaries. But those boundaries primarily provide clarity and precision. Without boundaries, there is no field or force. There is no space without substance, and all cosmic substances in relation are also finite, even though they may never be observed. Infinity exists only in the imagination, because every time we think of the limit of a world where there is no more substance, we can pass that limit. But the world is never thought of as infinite; what is assumed is only a mere possibility, that the cosmos could actually be much broader than it actually is. That is the essence of this work, where time never stops, and cannot be reversed, it is time that makes the transience of this world real.efforts of ants, striving to meet needs and fulfill desires. The concepts of cooperation and hard work are fundamental to modern life.

Multi Frame #6

Transcending Boundaries

Thank You
